SUMMARY

Software Developer building full-stack and backend systems with Go, Next.js, React, and PostgreSQL. Ships deployed, tested projects with authentication, row-level security, and CI/CD on GitHub Actions and Kubernetes.

TECHNICAL SKILLS

Languages: Go, JavaScript, Bash/Shell Scripting, SQL

Frontend: Next.js (App Router), React, Tailwind CSS, Zustand, three.js, GSAP, Framer Motion, Playwright

Backend: REST APIs, PostgreSQL (row-level security, wire protocol), Supabase (Auth, Postgres), Drizzle ORM, Better Auth

Containers & Orchestration: Docker, Kubernetes, Helm

CI/CD & Deployment: GitHub Actions, ArgoCD, Git, Vercel, Supabase, Neon PostgreSQL

Observability: Prometheus, Grafana, Loki, Promtail

PROFESSIONAL EXPERIENCE

Executive – Network Operations

Oct 2025 – Present

Quess Corp Limited — deputed to Indus Towers, Gurgaon

- Monitor real-time infra alarms for **18,000+** tower sites on the UOC alarm dashboard.
- Analyse hourly outage data in Excel (VLOOKUP) to find worst-hit areas, helping field teams prioritise restoration.
- Escalate critical incidents such as fires and major DG faults immediately to field team heads, enabling faster restoration.
- Raise and track L1/L2/L3 escalations for landlord and site-access outages through to resolution, helping reduce repeat outages.

PROJECTS

Velanthe — E-Commerce Storefront (Next.js + Supabase) | [Live](#)

- Built and deployed a full-stack e-commerce store with Next.js App Router, React, Tailwind CSS, Zustand, Supabase, and three.js, featuring product filtering, search, cart, wishlist, mock checkout, and order history, backed by unit tests.
- Blocked price tampering by pricing every order **server-side** from the catalog and ignoring browser-sent prices; orders change only through server actions, with **PostgreSQL row-level security** denying direct writes.
- Preserved carts across sign-in: guest carts persist in the browser, sync to Supabase after login, and **merge** with the account's saved cart so no items are lost.
- Diagnosed and fixed a production auth bug where Supabase's Site URL fallback sent every confirmation and password-reset email to localhost; added a scheduled **GitHub Actions** keep-alive to stop the free-tier database pausing.

Skillsight — Curated Link Platform (Next.js + PostgreSQL) | [Live](#)

- Built and shipped a curated link platform for frontend, design, and developer resources using Next.js App Router, Tailwind CSS, Framer Motion, Drizzle ORM, and PostgreSQL.
- Solved the broken-embed problem by detecting **X-Frame-Options/CSP** refusals server-side, allowing permitted sites to open in an in-app viewer while blocked sites fall back to a direct-visit screen.
- Generated destination thumbnails server-side with headless Playwright, storing captures in Vercel Blob and upserting by slug so re-seeding preserves existing images.
- Gated curation behind an authenticated admin dashboard using Better Auth with super-admin roles, user management, and audit logging while keeping the public shelf read-only.

tenantguard — Multi-Tenant Isolation Verifier (Go + PostgreSQL) | [Repository](#)

- Shipped an open-source Go CLI (**v1.0.0**) that **proves** cross-tenant data leaks: captured queries are re-run under a synthesised PostgreSQL row-level-security policy and result sets are diffed to identify demonstrated leaks.
- Built **5 commands** (triage, infer, verify, capture, audit) including a PostgreSQL wire-protocol proxy that records real test-suite traffic; verdicts run against a disposable **TEMPLATE** probe database, never live data.
- Added oracle self-checks: **verify** runs **4 self-checks per scoped table** and exits non-zero without producing a report when the policy fails validation.
- Validated against **2 real third-party PostgreSQL applications**, including coder and zitadel, where differing schemas surfaced and helped fix **2 real defects**.

GitOps & Observability Kubernetes Platform | [Repository](#)

- Deployed a Go service on a 3-node **KIND Kubernetes** cluster via a parameterised **Helm** chart, with **GitHub Actions** CI (tests, Trivy vulnerability gating, GHCR publishing) and **ArgoCD** self-healing GitOps delivery.
- Added observability with Prometheus RED metrics, Grafana dashboards, and Promtail/Loki log collection.

EDUCATION

SRM University

2020 – 2024

Bachelor of Technology in Computer Science and Engineering — CGPA: 7.8
